EXPERIENCE

Edustoke | Gurgaon

Jul 2025 - Feb 2026

Engineering Intern

- Built a full-stack web app (React, Next.js, Node.js, MongoDB) serving thousands of users, improving Lighthouse performance scores from 62 to 89 via SSR optimization.
- Developed 15+ reusable components and 8 RESTful API endpoints, reducing UI dev time by 35% and cutting API response time by 30% through MongoDB query optimization.
- Implemented dynamic routing and static site generation (SSG) using Next.js for content-heavy pages, reducing server load and improving SEO rankings through optimized meta tags, structured data, and semantic HTML

Qclairvoyance Quantum Labs Pvt. Ltd. | Hyderabad

Sep 2024 - Dec 2024

Engineering Intern

- Curated and validated a Natural Products database of 100,000+ compound entries, cutting researcher lookup time by ~60%.
- Conducted an in-depth review of 25+ scientific papers to inform and shape the database schema and architecture, ensuring domain accuracy and alignment with real-world research requirements.
- Developed and deployed a responsive research showcase webpage using HTML and CSS, presenting complex scientific data in a clean, accessible UI for researchers and stakeholders

ARM Worldwide | Remote

Jul 2024 - Sep 2024

Tech Intern

- Designed and deployed a voice recognition feature on a web application using Flask, enabling hands-free user interaction and improving overall accessibility and engagement on the platform.
- Built an AI-powered text generation application leveraging Google Cloud NLP services, streamlining the blog creation process for users by automating content drafting and reducing writing time significantly

PROJECTS

ZephyrVPN

Landing Page with React and Vite

- Built a fully responsive landing page for ZephyrVPN using React and TypeScript, leveraging component-based architecture to create modular, reusable UI sections such as Navbar, Hero, Pricing, and FAQ.
- Styled the entire application using Tailwind CSS utility classes, implementing a consistent design system with custom color palettes, spacing, and typography aligned with the ZephyrVPN brand

Skin Disease Detection using Densenet121

End to End Web App for Skin Disease Detection

- Using a Dataset of various images consisting of skin diseases to train a Densenet121 model to predict and estimate a disease based on the image which was provided to the model.
- Integrate a webpage with the program, to make it easier and more intuitive to interact with the model. The program is made to help and assist Dermatologists with diagnosing skin diseases.

ADDITIONAL

Technical Skills:

- Programming Languages:** Python, Java, JavaScript, TypeScript
- ML/DL Frameworks:** PyTorch, TensorFlow, Scikit-learn, OpenCV
- Web Technologies:** React, Next.js, Node.js, Express.js, Flask, Tailwind CSS
- Databases:** MongoDB, MySQL.

Languages: Fluent in English and Hindi.
